

Crackerjack

Green and productive

Strengths

- Mid-late
- High productivity
- Green grains with high TGW
- Suitable for cracking process

Technological quality

● Grain color	Green
● TGW	290 g

Agronomic characteristics

Type	Afila
Earliness at flowering	Mid-late
Height at maturity	40 cm
Lodging	Low susceptibility

Sowing

Sowing must be carried out as soon as possible in a good and dried soil. Optimal sowing density depends on soil types:

Loam soil: 70 gr/m²

Clay and stony soil: 80-100 gr/m²

Calcareous soil: 105 gr/m²

Quality and outlets

Crackerjack is a high yielding variety with green grains. It meets the requirement of cracking process.

The descriptive list is made from French official results for the varieties listed in France (1=susceptible, 9=very good level); (): notations to be confirmed or Agri Obtentions' notations; TGW: Thousand Grain Weight
